## Tutorial 1: September 21

- **1.** Prove from first principles that  $\log(n!) \in \Theta(n \log n)$ .
- **2.** Prove from first principles that  $n \in \omega\left(2^{\sqrt{\log n}}\right)$ .

**3.** Prove or disprove the following claim. If  $h_1(n) \in \Theta(f(n))$  and  $h_2(n) \in \Theta(g(n))$ , then  $\frac{h_1(n)}{h_2(n)} \in \Theta\left(\frac{f(n)}{g(n)}\right)$ . You should prove the statement from first principles or provide a counter example.

4. Provide a tight  $\Theta$  bound on the following pseudocode as a function of n:

$$\begin{array}{l} k \leftarrow 1 \\ \textbf{for } i \leftarrow 1 \text{ to } n \textbf{ do} \\ j \leftarrow 0 \\ \textbf{while } j \leq n \textbf{ do} \\ j \leftarrow j + k \\ \textbf{end while} \\ k \leftarrow 2k \\ \textbf{end for} \end{array}$$
