

The background is a vibrant blue with a subtle geometric pattern of squares and circles. In the top right corner, there is a large, bright yellow sun. A stylized white pen nib with a blue outline is positioned horizontally across the upper middle of the page. Below the pen nib, there are two dark blue, rounded rectangular banners. The top banner contains the text 'TUTORIAL 00' in white, bold, sans-serif font. The bottom banner contains the text 'Resources and Course Review' in white, sans-serif font.

TUTORIAL 00

Resources and Course Review

CS116

- Now all in Python!
- More than just Python though
- Assignments are due every Wednesday at 10AM
- Midterm: 19:00 – 20:50, Monday, March 2nd

CQ1:

On which day of the week are tutorials given?

- A. Thursday
- B. Friday
- C. Saturday
- D. Caturday
- E. Where am I?

MarkUs

- Found under Assignments -> MarkUs
- Do NOT use Internet Explorer (it does not work)
- Ensure the filenames match the given filenames
 - E.g. “a00q4.py”, NOT “aOOq4.py”
- Submit EARLY and OFTEN
- Check the public test results after submitting
- More information on the course website if you need more help

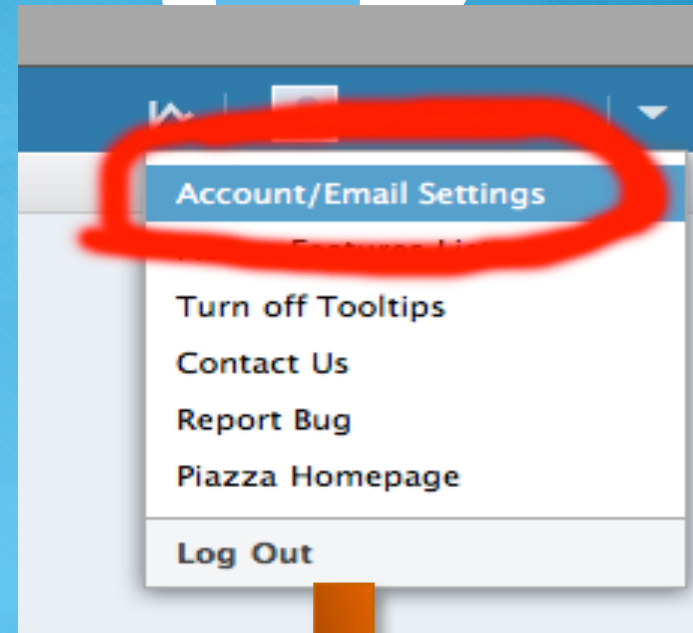

Piazza

- Discussion forum to ask questions and clarifications about assignments and course materials
- All announcements about the course will be posted on Piazza instead of course website.
- Activate your account by following the link sent to your UW email address

Removing Email Messages on Piazza

1. Top-right corner (Gear Icon)
2. Account/Email Settings
3. Scroll down to Class & Email Settings
4. Click “No Emails” for both options
5. Save Settings

Piazza Tips

- o Do NOT post any code related to assignment questions
- o Do NOT post questions asking for someone to debug your code
- o Please post your questions to the correct folder.

- Select 'Instructors' if it's a personal code-related question.
- It's private.
- Preserves Academic Integrity

Post Type

Question
if you need an answer

Note
*if you **don't** need an answer*

Poll/In-Class Response
if you need a vote

Post to

Summary
(100 characters or less)

Enter a one line summary...

- Read assignment CAREFULLY before posting on Piazza. Your question may have already been answered.
- Use Piazza search function to avoid repeated questions.
 - Search under the assignment folder first.

- Use meaningful names when posting new topic

e.g. “Values consumed for a01q3”, NOT “a01q3”

CQ2:

Which Piazza post name is most preferred?

- A. “Question Clarification”
- B. “Assumption about a...q...”
- C. “I need help!”

Design Recipe Review

```
import check
```

```
fn_name(p1, ... , p_n) :  
'''
```

```
    returns ...
```

```
fn_name: Type1 ... Type_n -> Type of Returned Value  
requires: ...
```

```
Examples:
```

```
    fn_name(val1_a, ... , val_n_a) => result1
```

```
    fn_name(val1_b, ... , val_n_b) => result2
```

```
'''
```

```
Function body
```

```
# Tests
```

Purpose

- Briefly describe what your function does
 - i.e how it uses the consumed values to return the returned values
- Mention the names of your parameters
- Do NOT copy and paste from the assignment question. We WILL deduct marks!

Contracts - Overview

- Capitalize the first letter of each data type
- Be specific:
 - Between Nat, Int and Float
 - Add requirements as needed:
 - be sure to mention parameter (by name) that the requirement applies to
- Please refer to page 3&4 of CS116 Style Guide for specific data types

Contracts - Common Mistakes

- Improper type names - check the Style Guide
 - e.g. Use `Str`, NOT `String`
 - Capitalization - e.g. Use `Int`, not `int`
- Incorrect types
- No restrictions
- Wrong number of parameters

Examples

- Unlike in CS115, all examples in CS116 are part of the docstring and are not actual function calls .
- Always include at LEAST 2 examples
 - for recursive functions:
 - Base case
 - Non-base case

Tests

- Download the file `check.py` from the CS116 web page
- Put a copy in the same folder where you save your assignments.
- Add the following line at the top of each assignment file:

```
import check
```

Tests

```
## Tests
```

```
check.expect("Q1T1", expr, value_expected)
```

OR

```
check.within("Q1T1", expr, value_expected, tolerance)
```

- Examples should be included with the test cases.
- Include ALL base cases and some non-base case tests
- You will learn about different `check` functions in the future.

Style Suggestions

- Lines should not be longer than 80 characters
- Add at least two blank lines between functions
- Use meaningful names for helper functions, parameters, variables, constants, etc.
 - E.g. `total_amt`, not `x`
- Simplify code as much as possible!
 - Use helper functions for repeated code

Tips

- ◊ Check Piazza daily for any announcements
- ◊ READ assignment carefully for any restrictions
 - ◊ Check post on Piazza for allowable functions
- ◊ Check basic tests to see if your code works
 - ◊ **WARNING:** This is NOT a thorough testing of your code

- 
- Do NOT copy and paste anything directly from assignment pdf file.
 - Get help:
 - Instructor and ISA's office hours
 - Book an appointment with us if necessary
cs116@uwaterloo.ca
 - Be careful. Do NOT Cheat!
 - NEVER show any student your code
 - Discuss verbally without taking notes
 - Penalty for cheating is 0 on that question and -5% on your final grade, and possibly further disciplinary action

CQ3:

Have you already installed Python 3
and Wing IDE?

- A. Yes
- B. No
- C. What?
