Post-Mortem

Assignment 05

February 13, 2017

Design Recipe

• A few students had only one example per function. You should always include at least two examples (and more depending on the complexity of the function).

• For recursive functions, you need one example for the base case and one for the recursive case.

• Helper functions also need examples and tests.

• Many students misuse Int/Nat/Num in their contracts.

Question 1

• Some students redefined length function.
