Design Recipe

- Some students used X notation instead of writing Any in their contracts.
- Many students missed base case example.
- Some students used list as a data type without specifying what type of values list have e.g. (listof Num).
- Some students did not indent their code and had too long lines.
- Many students did not specify require fields.

Question 1

- Some students used accumulative recursion instead of structural.

Question 2

- Many students were confused about University data type and used AL in their contracts instead of University.
- Many students wrote incomplete template and did not process UFaculty and Employee.
- Some students used (listof Employee) in their contracts instead of UFaculty.
- Some students did not use helper function which resulted in a massive code that was hard to follow.
