# The Model Pearl

---

**SPRING 2020**

---

# Application “Data Objects”

- what you manipulate
- eg. tables in a word processor...
- we'll see several more examples later today as we discuss pixel graphics

# The Applications Interface

- how you manipulate those data objects
- what operations are grouped in each menu?
- are there interaction techniques used often & consistently?
  - eg click-down-drag-release to select a range of contiguous objects
  - eg shift-option-click repeatedly to select multiple discontinuous objects
  - eg command-S to save the current document
- are there icons used consistently to represent analogous operations?
- eg
