Q3c For the bonus, a lot of students attempted to complete it, but often without giving proper formal justifications which they lost marks for.

Q4b A lot of students assumed that or implicitly used the fact that \( f_{p_i} \geq F(i + 1) \) where \( f_{p_i} \) is the frequency associated with the parent \( p_i \) of \( x_i \) in the Huffman tree \( T \) without proving it.

All the other written parts were done very well for this assignment.
