

## Review: MIPS Register Usage

```
R0,  $0  = ## zero
R2,  $2  = ## return value / system call number
R4,  $4  = ## 1st argument
R5,  $5  = ## 2nd argument
R6,  $6  = ## 3rd argument
R7,  $7  = ## 4th argument
R29, $29 = ## stack pointer
R30, $30 = ## frame pointer
R31, $31 = ## return addr
```

## How a System Call Works

```
/* In Nachos all user programs are linked
 * with start.s, it begins at virtual address 0
 */
.globl __start
.ent    __start
__start:
    jal    main    ## store addr of next
    move   $4,$0   ## instr in $31 then jump
    jal    Exit    ## if return from main exit(0)
.end    __start
```

## How a System Call Works

```
/* call.c
 * Show how a function/syscall is made.
 */
#include "syscall.h"

int
main()
{
    ## Q: What's wrong with this code?
    ## A: It isn't checking the return code
    Write("Hello World\n", 12, 1);
}
```

## How a System Call Works

```
.file 1 "call.c"
.rdata    ## read only data segment
.align 2  ## to 1=byte 2=word 3=dw
$LC0:
.ascii "Hello World\n\000"
.text     ## start text/code segment
.align 2
.globl main
.ent main
```

## How a System Call Works

```
main:
    .frame    $fp,24,$31
    .mask     0xc0000000,-4 ## bitmask saved regs
    .fmask    0x00000000,0 ## saved fp regs
    subu     $sp,$sp,24      ## min frame size 24
    sw       $31,20($sp)     ## save ret addr
    sw       $fp,16($sp)     ## save old frame ptr
    move     $fp,$sp        ## setup new frame ptr
    jal      __main          ## for system init
    la       $4,$LC0         ## addr of string arg1
    li       $5,0x0000000c    ## 12                arg2
    li       $6,0x00000001    ## 1                  arg3
    jal      Write           ## call Write
```

## How a System Call Works

```
$L1:
    .set      noreorder
    move     $sp,$fp        ## set stack ptr
    lw       $31,20($sp)    ## restore ret addr
    lw       $fp,16($sp)    ## restore frame ptr
    j        $31            ## return to __start
    addu     $sp,$sp,24     ## branch delay slot!
    .set      reorder      ## pops stack frame
    .end     main
```

## How a System Call Works

```
/* dummy function to keep gcc happy */
    .globl  __main
    .ent    __main
__main:
    j      $31    ## return to point of call
    .end    __main ## i.e. back to __start
```

## How a System Call Works

```
## start.s Comments: System call stubs:
## Assembly language assist to make system
## calls to the Nachos kernel. There is one
## stub per system call, that places the code
## for the system call into register r2, and
## leaves the arguments to the system call
## alone (in other words, arg1 is in r4, arg2
## is in r5, arg3 is in r6, arg4 is in r7)
##
## The return value is in r2. This follows the
## standard C calling convention on the MIPS.
```

## How a System Call Works

```
        .globl Write
        .ent    Write

Write:
        addiu $2,$0,SC_Write
        syscall
        j      $31
        .end Write
```

## How a System Call Works

```
/* system call codes */
#define SC_Halt      0
#define SC_Exit      1
#define SC_Exec      2
#define SC_Join      3
#define SC_Create    4
#define SC_Open      5
#define SC_Read      6
#define SC_Write     7
#define SC_Close     8
#define SC_Fork      9
#define SC_Yield    10
```

## How a System Call Works

```
void ExceptionHandler(ExceptionType which)
{
    int type = kernel->machine->ReadRegister(2);

    kernel->currentThread->SaveUserState();
    kernel->currentThread->space->SaveState();

    switch(which) {
    case SyscallException:
        switch(type) {

        case SC_Write:
            vaddr = kernel->machine->ReadRegister(4);
            len = kernel->machine->ReadRegister(5);
            fileID = kernel->machine->ReadRegister(6);
            retval = WriteHandler(fileID, vaddr, len);
            break;
```

## C Code for Segments Example

```
#define N    (5)    ## Preprocessor replaces this

unsigned int x = 0xdeadbeef;  # initialized data
int y = 0xbb;                # ditto
const int blah = 0xff;       # rdata (read only)
int data[N];                 # uninit data

struct info {    ## Doesn't use any storage!
    int x;
    int y;
};
```

**C Code for Segments Example (cont'd)**

```
main()
{
    int i;
    int j = 0xaa;
    int k;
    const int l = 0xee;  ## all above in regs/stack
    char *str = "Hello World\n";
    ## str in on stack or register
    ## Hello World in .rdata

    for (i=0; i<N; i++) {
        data[i] = i;  ## code/instructs in text
    }
}
```

**Coff2noff Output for Segments**

```
Loading 4 sections:
".text"  filepos  52 (0x34)      mempos    0   (0x0)
         size 736 (0x2e0)
".rdata"  filepos 788 (0x314)    mempos   768 (0x300)
         size  32 (0x20)
".data"   filepos 820 (0x334)    mempos   896 (0x380)
         size  16 (0x10)
".bss"    filepos -1 (0xffffffff) mempos  1024 (0x400)
         size  20 (0x14)
<not in file>
## See next few slides for explanations
```

**Coff2noff Output for Segments**

```
## .text  at 0x34 (52) in file
##      size = 0x2e0 (736 bytes)
##      starts at to virtual addr 0x0

## .rdata at .text start (52) + text size (736)
##      = 788 in file
## Contains 4 bytes for int blah and 13 for
## "Hello World\n\0" total = 17
## (word aligned in file, page aligned in mem)
## Page = 128 bytes
## 1 = 0x80, 2 = 0x100, 3 = 0x180, 4 = 0x200,
## 5 = 0x280, 6 = 0x300 7 = 0x380, 8 = 0x400
## .rdata starts at 0x300 in virtual memory
```

**Coff2noff Output for Segments**

```
## .data in file at .rdata start (788) +
##      .rdata size (32) = 820
## Contains 4 bytes for int x + 4 bytes for yy = 8
## .data starts at 0x380 in virtual memory

## .bss (no where because no values to store)

## (bss = Block Started by Symbol)
## have only a name / symbol but no value
## (uninitialized data)
```

### Some Output from objdump

```
Contents of section .rdata:
0300 ff000000 48656c6c 6f20576f 726c640a
    ....Hello World.
0310 00000000 00000000 00000000 00000000
    .....
Contents of section .data:
0380 efbeadde bb000000 00000000 00000000
    .....
## See next slides for explanation
```

### Some Output from objdump

```
## H = 0x48 e = 0x65 l = 6c ... \n = 0x0a
