

## Where to Go From Here

- CS 341: learn more about P, NP, NP-complete problems, intractability
- CS 462: revisit some of the ideas of CS 360, but at a much deeper level. Offered every Winter term.
- Graduate courses in automata, computational complexity, Kolmogorov complexity, etc.) (I'm teaching CS 860 in Winter 2020.)
- Self-study (for example, the book of Arora and Barak)
